

Prepared by WeConfig Team	Document WeConfig 1.20.1 Release Notes	
Approved by The Program Manager	Date March 25, 2024	Document No 186018-391e9d51

## Installation

The following prerequisites have to be fulfilled to successfully execute WeConfig:

- WinPcap 4.1.3 installed or,
- Npcap 1.6 or later

If neither WinPcap nor Npcap is installed, WeConfig will run in a reduced mode and not all functionality will be available.

WeConfig will offer to install WinPcap if it believes the user would benefit from it.

WeConfig will only maintain compatibility with current and legacy versions of Microsoft Windows that not has reached its EOL (End Of Life) date.

Note! If you are using Npcap make sure that you have acquired a valid license. Licensing details are available at <https://npcap.com/>.

## Usage

The following may have to be enabled on the managed switches/routers to get full functionality of WeConfig:

- IPConfig protocol for devices running WeOS 4
- mDNS for devices running WeOS 5, Ibex, and BRD/MRD devices.
- HTTPS (Web) must be enabled on WeOS devices. Administrator password must match the setup in the device access dialog. Factory default passwords will be assumed if no administrator password has been specified in WeConfig.
- SNMP protocol. The read community has to be set on the device, matching the setup in the device access dialog. Factory default ready community will be assumed if none have been specified.
- LLDP protocol
- SSH CLI access on WeOS devices. Administrator password must match the setup in the device access dialog. Factory default passwords will be assumed if no administrator password has been specified in WeConfig.

The functionality dependent on the respective item above is described below.

- Information gathering from the device, including topology information to be able to draw a device map is performed using SNMP.
- Basic Setup uses the IPConfig protocol to setup devices on devices running WeOS 4.32 and older. On such devices, the IPConfig protocol must be enabled on the devices to use Basic Setup.

Prepared by WeConfig Team	Document WeConfig 1.20.1 Release Notes

- Backup, restore and firmware upgrade all use the HTTPS interface on WeOS based devices.
- Upgrade on WeOS based devices uses the HTTPS interface.
- All configuration of WeOS devices depends on the use of CLI; hence, CLI must be enabled on the target devices.

## News

### RiCo v3

WeConfig now implements support for RiCo v3.

### WiFi Connections

WeConfig can now detect and visualize wireless connections between Ibex devices as well as display information regarding said connections.

### SFP DDM Monitoring

WeConfig can now show DDM values from SFPs on WeOS 5 devices in the diagnostics graph, as well as in the communication details page for individual ports.

### Link Local Addresses

It is now possible to add a link local address to a network card interface before scanning the network, by clicking a button in the toolbar.

## Limitations

- Upgrade using HTTPS-upload is supported from WeOS 4.13 and later. To upgrade an older WeOS version, TFTP/FTP method must be used. A TFTP or a FTP server must be running on the WeConfig PC. The path to the TFTP/FTP root folder is setup in the Settings dialogue.
- Hostname and location is limited to 10 and 11 characters for factory reset/default WeOS 4 devices, due to limitations of the IPConfig protocol.
- Conflicting IP addresses can only be identified on WeOS units, and only for the IP address retrieved using the IPConfig protocol.
- WeConfig does not identify if an IP Address is statically configured or retrieved from a DHCP server. When setting an IP address using WeConfig, it is applied as a static address.
- Non WeOS units have limited support in WeConfig.

Prepared by WeConfig Team	Document WeConfig 1.20.1 Release Notes

- Limited WeConfig SNMP trap support will be available when MS Windows SNMP Trap Host server is activated. For WeConfig to provide as much SNMP trap support as possible, please disable the MS Windows Trap Host server.
- If alarm monitoring for SNR high/low is to function properly, the device’s firmware version must be 4.18.0 or higher due to a limitation in earlier firmwares.
- Some NICs (mostly low end USB NICs) discard LLDP frames. This means that WeConfig cannot learn where it is connected in the network.
- VLAN configuration is not supported on WeOS 4.13.4 or previous versions.
- WeConfig might not show SNMP traps sent from routers.
- Device connections might not be displayed correctly until 30 seconds after a link up/down event.
- Configuration of passwords and password to access MRD devices must only contain character (a-z, A-Z and 0-9), otherwise access to device may not work.
- WeConfig is not able to configure Vipers with TTDP enabled on versions of WeOS prior to 5.14.
- WeConfig cannot detect powerline devices (DDW-002).
- The ping and traceroute tools cannot be executed reliably from **Falcon** devices due to a model specific limitation.
- The functionality of WeConfig in portable mode is limited.
- Optimization of firmware packages will not be done for WeOS 5.13.0 or higher.
- When importing devices from CSV files, model name and firmware version is required in order for a device to be properly identified. Unidentified devices are treated as “unknown devices”.
- WeConfig is not able to identify connections between xRD devices.
- Connections between MRD and BRD devices cannot be derived due to a firmware limitation.
- WeConfig cannot be started from a shared network drive in portable mode.
- When updating the log slider in advanced application settings, a restart of WeConfig may be needed to properly reflect the changes, particularly if trying to log “Everything”
- WeConfig cannot change IP addresses on more than one WeOS 4.33.0 device at a time, when they are in IP conflict with each other, due to a firmware limitation.

## Fixed Issues

Issue	Version	Category	Description
#0019522	1.20.0	GUI	Ports in FRNT and RSTP views are not sorted on WeOS 5 Vipers
#0019560	1.20.0	SYSTEM	SNMP V3 parameters aren’t stored in project file
#0019565	1.20.0	SYSTEM	Configure FRNT/RICO without knowing where WeConfig connects to the network does not warn

Prepared by WeConfig Team	Document WeConfig 1.20.1 Release Notes	
Approved by The Program Manager	Date March 25, 2024	Document No 186018-391e9d51

---

Issue	Version	Category	Description
#0019572	1.20.0	SYSTEM	WeConfig 1.19.x does not open a project file generated by WeConfig 1.18.x
#0019594	1.20.0	SYSTEM	Ports configured with LACP does not show proper port names for aggregates in topology
#0019596	1.20.0	SYSTEM	When using WeConfig to Configure FRNTv2, configuration occasionally fails to apply to all ports
#0019597	1.20.0	SYSTEM	When Creating a new Project, the FRNTv0 View is not cleared
#0019685	1.20.1	SYSTEM	MAC address security scan broken
